## **Washington:**

NASA has achieved great success. For the first time a planetary defense test i.e., DART mission has been completely successful. Now in the future it will be possible to help prevent the attack of the asteroid hovering on the earth. Earth can be saved with this technology. According to scientists, the biggest threat to the earth in the coming time is from asteroids along with climate change. As part of the Dart mission, the spacecraft collided with the moon-like rock Dimorphos of asteroid Didymos on 27 September 2022 i.e., at 4.45 am. Dart means mission accomplished. In this, the spacecraft collided with an asteroid. In which direction Dimorphos went, the data is yet to come.
